TRAP
RUBBERTECH

2025
CATALOGUE

IMPORTANT FACTS ABOUT OUR PRODUCTS

1. Rubbertech Swaziland produces traps from EPDM Rubber which is accepted worldwide as the most suitable material for the production of waste traps despite being more expensive than other options.
2. The material we use today has been refined over 20 years to optimize production results by various Rubber chemists and engineers.
We do not compromise on our belief that it is the most suitable material to provide you with a long-lasting durable product that will not harden or crack.
3. The material together with the strict production controls we use results in fewer product defects during installation & handling because of durability thus reducing frustration for the plumber.
4. Before you buy another tap, ask yourself what material you are happier with. Does saving a few rands now provide you with long-term benefits?
5. Rubbertech produces full range of P and S traps in all the different configurations needed to facilitate easy /consistent sealing installations

PVC Bath Trap Top Overflow
Elbow

Flexi T Piece Only

Waste Trap Clamps
32mm

PVC Combination Connector
40mm

WHY CHOOSE ULTRATRAP

Have you ever considered what goes down your drain in terms of temperature and chemical composition?

There is hot and cold soaps, bleaches, hair products, beauty products, fats and oils, e.t.c. Because a trap stores same contents of whatever goes down a drain, it is exposed to all these attacks for a longer period of time.

It is for this reason that EPDM is chosen as a material that will last as it is extremely stable and resistant to attack. EPDM is used in the motor industry for items such as radiator, hoses and door seals.

If you see a trap that has gone hard, cracked, shrunk, perished, it is not EPDM!

BENEFITS OF EPDM

- ✓ Extremely stable material.
- ✓ Permanently flexible (does not shrink, crack, or perish).
- ✓ Resistent to chemical attack.
- ✓ Resistant to temperature flactuation
- ✓ Easy to install/seal
